> Katri devised an elaborate system. Rather than send corrupt money straight to banks overseas, he would use local banks in Kenya, such as Trans National Bank, owned by the Mois, Biwott and Kulei, to send vast sums through Nostro accounts – the bank's Forex accounts overseas – and then several months/years later would send the money on and split it between several banks such as UBP . . . Katri has gone underground since 2001, when a Swiss investigation was launched into his dealings in Kenya. It is understood that he lives in Monte Carlo. Katri has also been connected to the Halliburton scandal in Nigeria through Jeffrey Tessler who he helped to set up an account at UBP five years ago. Tessler, an unscrupulous lawyer from north London, was getting commissions somehow connected to the bribes paid out by Halliburton, and new evidence implies he is still receiving commissions.

Even major global institutions such as Barclays and HSBC were named, and while there was no suggestion that they themselves had done anything illegal, the report showed that no part of the international financial system was free from the taint of stolen, dirty money. Looking at the report, you could also see exactly how such money had been routed through other jurisdictions, wearing a new disguise at each stage, often but not always ending up in international tax havens. This was exactly the kind of corruption WikiLeaks was set up to reveal. And upending tax havens would be a future hobby of ours.

I got hold of this document and later, after leaving Africa, it became an important new posting for us. We fed it to Xan Rice of the *Guardian*, who ran it as a front-page story on 31 August 2007, headlined 'The Looting of Kenya'. The coverage was good but was not much picked up by other papers in Britain. The reaction in Kenya itself was giant: they took their lead from the *Guardian*, though they were more cautious in the way they presented the story. The Kibaki regime's denials were prominent, though we felt satisfied, knowing the secret was not only out but that the long-term effects were sizeable. It was clear that Kibaki, who had been supported by Moi – perhaps as a result of the leverage Kibaki had gained by commissioning the report in the first place – was now on the back foot and that was a gain for justice. A former UK High Commissioner to Kenya had a clear view of it when he said that the report had enough in it 'to blow not just the Mois but most of the Kenyan establishment out of the water'.
