Division (**2a**) was responsible for conduct of operations in the Dras and Mushkoh Valley sub-sectors.

H3: Soldier, Jammu & Kashmir Rifles

This soldier wears the brushstroke-pattern uniform and web equipment and an M1974 helmet over woollen headgear. The 84mm Carl Gustav rocket launcher he carries was introduced in the Indian Army as an anti-tank weapon in 1976. It remains a vital weapon for the infantry due to its versatility as it can be fired from the shoulder, the air or a vehicle, and can chamber high-explosive anti-tank (HEAT), illuminating and smoke ammunition rounds. It saw extensive action in Sri Lanka and then in the Kargil War, but its widespread use began during the counter-insurgency operations in Kashmir and in the north-east. It is commonly used against concrete buildings and bunkers, though the substantial back-blast and booming sound mean that it needs to be handled with care.
