indicated by the single chevron on each arm. His Pattern 1937 web equipment is coloured white.

B2: Bren-gunner, Ladakh sector

This jawan is armed with a .303 Bren LMG. He wears the olive-green uniform with woollen pullover and woollen balaclava headgear under his Mk II helmet. The Sino-Indian War of 1962 was a rude wake-up call for India and the Indian Army, as it suffered a humiliating defeat at the hands of the Chinese People's Liberation Army. The years of neglect and lack of modernization meant that the Indian Army was ill-equipped and -clothed for the conflict.

B3: Soldier, Ladakh sector

In November 1961, India's leaders decided that its forces should remain in effective occupation of the whole frontier from NEFA to Ladakh by setting up posts or by means of patrolling. This decision launched the Forward Policy and had a major effect in determining the deployment in Ladakh. The plan was to patrol as forward as possible and establish additional posts as required to prevent any further ingress by the Chinese into Indian territory. Armed with a .303 SMLE bolt-action rifle and carrying a box of ammunition, this soldier on patrol wears a jacket-coat parka, woollen cap and woollen trousers with ammunition boots and web anklets. He is also wearing a web belt with ammunition pouches, and goggles on his forehead ready for use.

C: 1965 (1)

C1: Infantry officer, 19 Infantry Division, Haji Pir Pass

The Indian plan to capture Haji Pir Pass envisaged a pincer movement: the pincer from the Uri side was codenamed Operation *Bakshi* and carried out by 19 Infantry Division (**1a**) with 68 Infantry Brigade under command, while the pincer from the east was codenamed Operation *Faulad* and carried out by 25 Infantry Division, to link up from Poonch in the south of the bulge. The main strike units were 1 PARA, 19 PUNJAB and 4 RAJPUT, while 6 JAK LI and 4 SIKH were held in reserve. The operation was launched on 26 August and by 10 September the entire Haji Pir bulge was under Indian control. This officer is observing the enemy defences through his field binoculars. He is dressed in the olive-green cotton uniform and wears a boonie hat. He carries a 9mm 1A pistol in a holster fixed to his web belt, with lanyard visible.

C2: Infantry NCO, Punjab

In the XI Corps sector, the Indian plans were initially defensive, but after the Rann of Kutch confrontation, a closer study revealed that the Pakistanis were likely to remain on the defensive in the Punjab in the event of war. With the majority of Pakistani forces west of the Ichhogil Canal, the Indian Army believed that it could advance to the canal and secure its eastern bank. Plans were accordingly drawn up for an Indian offensive that was launched on 6 September 1965. This infantry NCO is dressed in the olive-green summer uniform and ammunition boots with web anklets. He carries a 9mm Sterling L2A1 SMG. The bayonet (not visible) is carried in its scabbard, fixed to the left side of his web belt.

C3: Gorkha, Kashmir Valley

Incursions by Pakistan and attempts to disrupt Indian communications along the strategic Srinagar–Leh road continued throughout August 1965, prompting India's Western Command (**3a**) to carry out limited offensive operations in Kashmir and even re-occupy Pakistani posts along the ceasefire line in Kashmir. This Gorkha wears the olive-green cotton uniform with boonie hat, ammunition boots with anklets and web equipment,
