emotions— happiness, gratitude, a sense of fulfilment and these lines from a littleknown poet of the nineteenth-century crossed my mind:

For all your days prepare
And meet them ever alike
When you are the anvil, bear –
When you are the hammer, strike.

RATO motors were mounted on aircraft to provide the additional thrust required during the take-off run under certain adverse operating conditions like partial y bombed-out runways, high altitude airfields, more than the prescribed load, or very high ambient temperatures. The Air Force was in dire need of a large number of RATO motors for their S22 and HF-24 aircraft.

The Russian RATO motor shown to us at the Tilpat Range was capable of generating a 3000 kg thrust with a total impulse of 24500 kgseconds. It weighed 220 kg and had a double base propel ant encased in steel. The development work was to be carried out at the Space Science and Technology Centre with the assistance of the Defence Research and Development Organization (DRDO), HAL, DTD&P(Air) and Air Headquarters.
