youngest scientists present their team’s work. That would help them in visualizing the whole system. Gradual y, an atmosphere of confidence grew. Young scientists started questioning senior col eagues on solid technical issues. Nothing daunted them, because they feared nothing. If there were doubts, they rose above them. They soon became persons of power. A person with belief never grovels before anyone, whining and whimpering that it’s al too much, that he lacks support, that he is being treated unfairly. Instead, such a person tackles problems head on and then affirms, ‘As a child of God, I am greater than anything that can happen to me’. I tried to keep the work environment lively with a good blend of the experience of the older scientists mixed with the skil s of their younger col eagues. This positive dependence between youth and experience had created a very productive work culture at DRDL.

The first launch of the Missile Programme was conducted on 16 September 1985, when Trishul took off from the test range at Sriharikota (SHAR). It was a bal istic flight meant for testing the inflight performance of the solid propel ant rocket motor. Two C-Band radars and Kalidieo-
