at the moment … but the guys seem to have worked Roelof out a little. He's basically got one delivery and only varies his pace. I think Wayne Parnell is going to be a key bowler. Wayne has the ability to do the same job that Lasith Malinga does for Sri Lanka.

Malinga's economy rate is helluva impressive – 7.02 runs per over at the 2010 IPL and 7.92 at the T20 World Cup – the way he mixes up three deliveries is the key to his success. Firstly, he's got a great yorker – and his lack of height and that slinger delivery action of his are tailor-made to bowl this kind of ball. There's a lot less margin for error on a yorker if the ball is coming in low than when it is bowled by someone as tall as Morné Morkel, for example.

Secondly, Malinga's got a good slower ball. And, thirdly, he has a bouncer. Malinga mixes up those three deliveries right from the start of his bowling spell – it doesn't matter whether he's bowling during the opening Power Play or the last few overs. That's all you get from him. Those last two deliveries, combined with the accuracy of his yorker, make him really tough to score against. I mean, the guy does not bowl a length ball. Maybe if he's getting some swing, he might send down the odd length ball to induce a nick, but that's about it. Bowl a length ball in 20-over cricket and whether you are Morné Morkel or Dale Steyn, the guys are going to send it over the boundary.

Proteas bowling coach Vinnie Barnes keeps telling me how tough it is to bowl a yorker from nine feet up (or however tall Morné is with his hand up), but that's the way the game is going. Morné's a helluva talented bowler and I've no doubt he will be able to adjust his sights. Look at Pakistan's Umar Gul – he's pretty tall and he has a great yorker, so it's not like it can't be done.

When our guys were under the cosh from England in that T20 World Cup game, they didn't know what to do. They kept trying to bowl bouncers, and those were travelling as far as the nice, juicy length balls they were bowling. The bouncer seems to be our bowler's stock dot ball. In South African conditions, if our bowlers need a dot ball or two, they go for the short-pitched delivery. And that does work *here*.

On Indian pitches, where we'll be playing the next 50-over World Cup, that strategy is going to be much less effective than it was in the West Indies. As you know, the ball just doesn't get up there at all. It'll get messy, unless we utilise bowlers who have a good yorker in their arsenal. As good
