lation of Juzjani's *Tabaqat* overall. The comparison may not reveal egregious differences at first sight, but close scrutiny, particularly of the architectural terms and their optimal translations, demonstrates the importance of *Tabaqat* overall while also urging the text's juxtaposition with other literary *genres* to obtain its "hors-texte" significances.

11. Cf. Thomas 2018: 149, 151. It bears noting that scholars have similarly lamented the lack of exact details in prose and poetry produced also at the Saljuq court at Isfahan, which Durand-Guédy (2010: 79–80, 88–90) has posited as the Saljuq summer capital, at least as of the reign of Malik Shah when the need to "domesticate" the Turkmen nomads among Saljuq ranks came to the fore. Nevertheless, where there is incidental and largely metaphorical–ceremonial mention of architecture, it becomes apparent that "the Saljuq dynasty left its mark on spaces of two kinds … the military and the religious," rather than the palatial (cf. *ibid.*, 92–100).
12. It is noteworthy that the *textual* engagement with and utility of architecture, particularly across the various genres of Arabic and Persian historical writing, seemed to remain symbolic and metaphorical until the late early modern period. Descriptions of the physical reality and even materiality of the built environment apparently shifted only in late eighteenth–early nineteenth-century historical writing: see esp. Khazeni 2018.
13. Cf. Meisami 2001: 21; and *ibid.*, 42 (citation of Winter 1993: 39).
14. Meisami 2001: 22.
15. The debates surrounding the location of Firuzkuh and whether the *minar* at Jam was indeed part of the Shansabani "summer capital" originated during the later nineteenth-century Afghan Boundary Commission's information-gathering tours (esp. Holdich 1910: 223ff.). It is noteworthy that many of the variant opinions were engendered by historically anachronistic preconceptions regarding capitals (e.g., Leshnik 1968); processes and markers of Islamization (e.g., Maricq and Wiet 1959); and the transhumance/nomadic pastoralism of the Shansabanis (e.g., Wiet 1959; Herberg 1982). Vercellin (1976) did, nonetheless, address some of these issues.
16. Cf. Juzjani vol. I, 1963: 375 (trans. vol. I, 1881: 404).
17. Thomas 2018: 160ff.
18. Pinder-Wilson (2001: 166) lamented that Juzjani did not specify whether it was the Jam Rud or Hari Rud that flooded and overtook the mosque, but seemed to spare the *minar*; MJAP's invaluable archaeological work at the site all but definitively indicated that it was the Hari Rud that broke its banks, since "fluvial deposits overlying the courtyard paving in all the soundings [became] thinner to the west" (Thomas 2018: 173).
19. Cf. Thomas 2018: 152; also Juzjani vol. II, 1963: 127–128, 132–133 (trans. vol. II, 1881: 1047–1048, 1057). There is archaeological evidence that Firuzkuh's settled population witnessed at least some destruction of households and belongings, according to Thomas (2018: esp. 205). However, it should also be noted that the continued transhumance of the *Firuzkuh* Shansabanis and, quite possibly, the largely "textile architecture" of these elites would have presented difficulties in recovery from the archaeological record even without
