Mongol destruction. Cf. Durand-Guédy (2013a) for comparative examples from Saljuq contexts throughout Iran; and also *infra* in main text.

20. Thomas 2018: 184, 190–191.
21. Noted by Herberg and Davary (1976: 61) and utilized by Thomas (2018: 174–176) in his analysis of the archaeological finds at Qasr-i Zarafshan.
22. Thomas 2018: 173–184.
23. For the Saljuq royal encampment at Isfahan, see esp. Durand-Guédy 2010: 93–101. Cf. also Durand-Guédy 2013a: 175–182 for a discussion of the *kushk* incorporated into Saljuq encampments. The author also brought to light intriguing discrepancies between various Persian textual passages referring to the same royal residential complex, most notably the periodic substitution of the term *kushk* with *qasr* (*ibid.*, 153). Evidently, some historical Persian authors deemed *qasr*, rather than *kushk*, to be more in keeping with the unique role played by palaces as embodiments of royal power.
24. It cannot escape our notice that Juzjani largely relied on what was by the eleventh century not only the "basic repertoire of typical components of palace descriptions," but also recognizable rhetorical devices. The former included *manzar* (belvedere), *riwaq* (gallery, columned promenade), and *shuruf* (towers or crenellations); while the latter were exemplified by descriptions of the unprecedentedness of the overall complex, symbolized in the inability of the engineer/geometrician (*muhandis*) to have imagined or created such a palace before. Cf. *supra* Juzjani's description of Baz Kushk-i Sultan; and esp. Meisami 2001: 24, 26, 28, 29.
25. According to D. Thomas (pers. comm., April 2018), it is difficult to identify where, exactly, in the vicinity of Jam-Firuzkuh the space would have been available to accommodate large encampments.
26. Recent scholarship on the Saljuqs and their building of empire rightly eschews any essentialist idea of an innate preference for nomadic pastoralism ensuing exclusively from their Turkic origins; rather, Durand-Guédy (2013a: 173) has suggested that "the distribution of power [in the medieval Persianate world] precluded them from living like urban Iranians." Cf. Chapter 1; also Durand-Guédy 2013b; Durand-Guédy 2018; Peacock 2015: 143ff., 172. For a discussion of small architectural elements incorporated into Saljuq tent "palaces," see esp. Durand-Guédy 2013a: 154ff. Not only the early Saljuqs but also the later Saljuq Sultan Malik Shah (r. AH 464–85/1072–92 E) – who "enjoyed unparalleled authority during his long reign" – maintained a studied distance from even their major urban conquests: Tüghril and Chaghrï remained in their camp after their momentous conquest of Marv (*c.* 1035); Tüghril also decided against settling in Baghdad after its occupation in AH 447/1055 CE; Malik Shah preferred the environs of Isfahan; and, of course, Sanjar was frequently encamped somewhere in the vast expanses surrounding Marv, Herat, Tus-Nishapur – near which the twelfth-century Robat Sharaf may have provided part of the royal encampment (Figures 1.10–1.13) – and Isfahan. Cf. Durand-Guédy 2013b: 328–335; Peacock 2015: 143, 166–172.
27. Not *all* of the surveillance or defensive structures documented at Firuzkuh proffered signs of elite occupation, nor were they all necessarily of the same date. In 2003 MJAP re-examined ruined towers first documented by Herbert
