and Davary (1976), to the east of the probable mosque (see *infra* in main text) and *minar* on the north and south banks of the Hari Rud: with the exception of one ruin, they were of weak construction and likely not for defense but vigilance, seemingly designed for *inward* surveillance of the city and its inhabitants, rather than focused outward toward the valleys granting access to Jam-Firuzkuh from the east. Thus, Thomas (2018: 184) proposed that these eastern towers might have been constructed during the tumultuous pro-Karramiyya riots of 1199 (cf. Chapter 4), or after the Shansabanis' fall and Firuzkuh's occupation by the Khwarazm-shahs, *c.* 1215.

28. For the wall remnants, see Le Berre, in Sourdel-Thomine 2004: 54–61, and *ibid.*, 95; also Thomas 2018: 159–160. The placement of the Jam-Firuzkuh *minar* has been described as "idiosyncratic," given its location on the *qibla* side of the mosque (Flood 2005b: 538). Pinder-Wilson (2001: esp. n. 43) noted that Saljuq minarets were frequently located at or near the north corner of their mosques. Although, the Nayin *jami'*s (tenth century) southeastern minaret, and Barsiyan's (eleventh–twelfth century) on the northwest rather supports Hillenbrand's (1994: 154) observation that "there seems to have been no consistent practice governing the location of single minarets within the mosque." The location of Jam-Firuzkuh's *minar* at the northwest corner of the probable mosque/*'idgah-minar* complex (as described *infra* in main text), then, may actually indicate an overall adherence to Saljuq precedents, rather than a deviation from them.
29. Dr. David Thomas, pers. comm., May 2018; cf. also Thomas 2018: 160–173.
30. Dr. David Thomas, pers. comm., May 2018; see also Flood 2005b: 538; Flood 2009: 95–96.
31. See Sourdel-Thomine 2004: 93–95, 149, 154; Flood 2005a: 276, 279–281; Flood 2005b: 538, 541; Flood 2009: 99; Lintz 2013: 91, 95–96. By consulting his own dig books and calculating orientations *via* Google Earth, Dr. David Thomas (pers. comm., July 2018) verified that the *minar*'s niche motif was oriented to approximately 260°, thus plausibly functioning as a *mihrab* (from Jam, Makka is 245°). The Karrami concordance with some Hanafi tenets (Zysow 2012: pts. I, ii, v) would have made the preferred Hanafi *qibla* in Central Asia of due west (270°) acceptable also to the Karramiyya. For the customary *qibla*s of the Hanafis and Shafi'is in Central Asia, see D. King (1982, 1995); and esp. Chapter 4. Moreover, Dr. Thomas 2005 documentation of a modern "nomad mosque," roughly outlined with stones and oriented to the *minar*'s east face, indicated that the niche served as a *mihrab* in recent times as well.
32. Sourdel-Thomine 2004: 95 (emphasis added).
33. Shokoohy and Shokoohy (1987: 129–132) proposed that the *'idgah* they identified 1 km northwest of Bayana/Sultankot in eastern Rajasthan dated from the 1190s, or the period of the forays into northern India undertaken by the Ghazna Sultan Mu'izz al-Din and his military deputies (see Volume II). The authors further claimed that an architectural precedent for this type of prayer space could have existed at the eleventh-century South Palace at Lashkari Bazar, specifically the so-called Great Mosque of the Forecourt. However, notwithstanding the unusually elongated plan of this structure, it
