in the city afterward. See Gholam-Hosayni 1990; also Nizami ʻAruzi (trans. Browne 1921) 1978: 7–11.

56. Cf. Ghafur 1960: 2, 150–151; Anawati 2012.
57. Juzjani's dedication of an entirely separate section (XVIII) of *Tabaqat* to the "Shansabaniyya of Tukharistan and Bamiyan" contains the lengthy passage on his father Maulana Siraj-i Minhaj's move to Bamiyan from Firuzkuh. Historiographically, such an organizational device in *Tabaqat* places the Bamiyan branch of the family on a par with the one at Jam-Firuzkuh. It could also be that, given his encomium of Maulana, Juzjani separated and highlighted the Bamiyan branch as much to attest to its status, as to pay homage to his father's erudition and piety. Cf. Juzjani vol. I, 1963: 389 (trans. vol. I, 1881: 430); also Nizami 1983: 76–77. Edwards (2015: 112) cited another example of Juzjani's subordination of historical events to individual narrative in his all too brief report on the Ghazna Shansabani expansion into the Indus Valley (Chapter 6). Rasikh (2020: 113) described the emphasis of ties to well-known personages as "a literary trope for medieval Muslim historians with which they document consciously their personal, familial, and professional biographies."
58. Cf. Juzjani vol. I, 1963: 389 (trans. vol. I, 1881: 429–431) with emphasis added.
59. It is well known that many areas lying in the Mongols' eastward progress suffered destruction, e.g., the Marv oasis where Mongol forces ransacked Sultan Sanjar's mausoleum while seeking precious objects as loot. See Hillenbrand 2011: 280; Jackson 2017: 175. Bamiyan was especially unfortunate, however, to have been the place where Chinggis Khan's favorite grandson Möe'tügen was killed, for which the entire population was massacred and the town and its surrounding valleys gutted – a level of ruination apparently still visible through the fourteenth century. Cf. Gardin 1957: 228; and esp. Jackson 2017: 158. Indeed, Inaba (2019: n. 35) noted the absence of Bamiyan-minted coinage after the thirteenth century – a possible indication that Mongol destruction had enduring politico-economic effects on the region. In contrast to Bamiyan, it appears that only one Mongol incursion entered into the heart of Ghur, heading southward from Kashi or Ahangaran and reaching the headwaters of the Rud-i Ghur; while it is possible that the party pushed through to Tiginabad/Old Qandahar, the regions of al-Rukhkhaj and Zamindawar had always been more readily accessible *via* Ghazna from the east. Cf. O'Neal 2017; see also Chapter 2.
60. Gardin's (1957) study of ceramics from the Bamiyan basin focused almost exclusively on the finds from Shahr-i Ghulghula (see *infra* in main text), which he contextualized within the ceramic production of the wider Islamic-Persianate cultural sphere of Iran and Central Asia. It is only the cursory but still very valuable study of 250 ceramic shards collected by Marc Le Berre during his 1974–1975 surveys of parts of the Hindu Kush – principally Bamiyan's secondary valleys – that provides an overview of developments and tentative ceramic as well as architectural chronologies of the region. Cf. Le Berre et al. 1987; Le Berre et al. 1985–1988.
61. The work of Le Berre and his contemporaries of the Délégation Archéologique Française en Afghanistan (DAFA) (1987; 1985–1988), and that of Lee (2006)
