Notes

1. The dating of Shah-i Mashhad is not definitive due to the erosion of its inscriptional program, particularly the plaited Kufic on the principal southern portal (Figures 4.1 and 4.4) (inscription Nos. 1 and 2 in Casimir and Glatzer 1971). The initial reading of the date was AH 561/1165–1166 CE, modified later to AH 571/1176 CE, which continues to be accepted. Cf. Casimir and Glatzer 1971: 56; Glatzer 1973: 50; Blair 1985: 81. Najimi (2015: 148 n. 33, 151 n. 54), while not attempting to re-read the date itself in the inscription, does reconcile *both* proposed years by stating that a decade-long construction of the complex was realistic, "based on his experiences working on restoration projects in Afghanistan."
2. Cf. Introduction esp. for the Salar Khalil, west of Balkh (Juzjan Province), possibly falling within the ambit of the Bamiyan Shansabanis. These architectural remnants are datable to the later twelfth century, likely of non-royal but still elite patronage. See also Introduction and Chapter 1.
3. The Appendix gathers together the monumental historical and religious epigraphy from these structures, serving as a complementary reference to the discussion in this chapter and the following one of the import of this inscriptional corpus.
4. Blair 1985: 83.
5. Nishapur's sectarian riots are well known, thanks to the work of R. Bulliet and others: here, prior to the city's demise in the wake of the Oghüz raids of the 1150s, the two predominant and rival *madhhab*s of the Shafi'is and Hanafis were prone to violent confrontations. Among other Sunni orthodox sects, the Hanbalis and Malikis were relatively few in number, mustering less violence-inciting fervor. The Karramiyya also, even if marginalized as heterodox (discussed *infra* in main text), periodically amassed enough clout especially among the poor in the northwest of the city, to instigate violent eruptions against the dominant religious sects. Cf. Bulliet 1972: 12, 30, 74, 76; Zysow 2011/2012: pt ii; and Chapter 2.
6. For the association of Qur'anic inscriptions and Hadith with certain *madhhab*s, see Blair 1992: esp. 9–10, 52–53, 78. For the *minar* of Jam-Firuzkuh, see Sourdel-Thomine 2004: 153ff.; Flood 2005a: 270–273; and *infra* in main text.
7. While Blair (1985) first deciphered and published several of the Chisht inscriptions principally in the more intact southern Structure A, Dr. Viola Allegranzi is in the process of re-examining, transliterating, and translating the inscriptions in *both* the structures surviving at the site (see below). Her work is based on Josephine Powell's photographs from the mid-twentieth century, as well as a comparison with Ludvik Kalus' readings of the inscriptions, published on the digital database *Thesaurus d'Epigraphie Islamique* (*TEI*): cf. fiche 37804. I am deeply grateful to Dr. Allegranzi for sharing her work in progress, which henceforth is cited as Allegranzi 2019b (forthcoming). See also Ball 2008: 179–181; Ball 2019: No. 212 for a description of the site, plans and sections.
8. A possibly similar anachronism occurred on an undated *jital* minted at Kurraman (modern Parachinar), between Peshawar and Gardiz, naming one Shams al-Din as the sovereign. The coin has been attributed to the
