376); also Casimir and Glatzer 1971: 56ff., Blair 1985: 81ff.; Najimi 2015: 149. For all sources on the complex and site, see Ball 2019: No. 1023.

13. Najimi 2015; see also below.
14. Juzjani vol. I, 1963: 354 (trans. vol. I, 1881: 367). As mentioned in Chapter 1, it might have been during these military actions that Saif al-Din briefly occupied Herat, where coins were issued with his *laqab* and the Herat mint stamp (see also O'Neal 2016a; O'Neal 2020: 200–201).
15. In this case, the apparent deviation from the generally exogamous marriages of the Firuzkuh sultans (note above) was in fact an extremely convenient use of the patrilineal cousin marriage prescribed within Islam. The marriage of Jauhar Malik and Shams al-Din presumably took place between AH 556–558/1161–1163 CE: it must be remembered that 'Ala' al-Din Husain *Jahan-suz*, upon acceding to the throne of Firuzkuh in AH 544/1149 CE, had imprisoned both the sons of his brother Baha' al-Din, likely when the boys were quite young. After 'Ala' al-Din's death in AH 556/1161 CE and the accession of his son Saif al-Din, the latter released his cousins and, perhaps by way of healing the familial breach, married his sister to his elder cousin Shams al-Din. Shortly after the nuptials, the unforeseen death of Saif al-Din occasioned yet another transferal of the Firuzkuh throne to a collateral Shansabani lineage (cf. Chapter 1). In hindsight, then, this *fourth* transferal was surely that much smoother and more acceptable by virtue of the marriage of Saif al-Din's sister to the eventual Sultan Ghiyath al-Din. Cf. Juzjani vol. I, 1963: 346, 395 (trans. vol. I, 1881: 357, 446–447).
16. Although documented in the 1970s and again in the 1990s, the modern interactions of nomadic populations with sites such as Shah-i Mashhad – precisely what led to the site's "discovery" by Casimir and Glatzer (1971) – may provide a useful parallel to the historical contacts between these groups and the monumental complexes dotting their migration routes. The notable deterioration in the complex within twenty years (Figures 4.1 and 4.4), however, is not necessarily attributable to this interaction, but rather to the agriculturalists of the region, who had greater need for the building materials readily available at abandoned monumental sites.
17. Franke and Urban and their archaeological team documented structures like Gunbad-i Shohada and Qala-yi Sarkari, both between Awbeh and Chisht, and Rabat-i Chauni, south of Chisht. Gunbad-i Shohada could have been a commemorative structure of the recognizable "domed cube" typology, quite plausibly attributable to late Saljuq/Shansabani presence (or later); the Qala and Rabat are square-walled compounds with corner circular towers, which, as we have seen in the case of Danestama (cf. Chapter 3), could have been pre-Islamic structures that were reused or repurposed during later periods, to be determined only with further study. Cf. Franke and Urban 2006: 7–15, 18–20, 22–23; and *infra* in main text.
18. Flood 2009a: 101; see also Chapter 2.
19. Sourdel-Thomine (2004: esp. 156ff.) first proposed the reinterpretation of the *minar*'s inscriptional program. See also Flood 2005a: 269–273; and Flood 2009a: 96–97. The Jam-Firuzkuh *minar* was also discussed in Chapter 3 – see also *infra* in main text.
