structure previously at the edge of a shifting frontier – the very definition of *ribat* – would be essentially repurposed as a place "for those devoted to the contemplative life … [and] for the spreading of learning." Cf. Tritton 1957: 106–108 and notes; Makdisi 1981: 9–34; Böwering and Melvin-Koushki [2010] 2012: pts i and ii; Edwards 2015: 120–121.

31. One of the methods of implementing imperial Saljuq control was *via* the patronage of various Sunni *madhhab*s in major urban centers – patronage that included the construction and endowment of lavish *madrasa*s. See Böwering and Melvin-Koushki [2010] 2012: pt ii. Bombaci (1966, cited in Allegranzi 2019a, vol. I: 161 n. 148) proposed that a possible precedent for the imposing Saljuq *madrasa*s, promulgated particularly by the famous *vizir* Nizam al-Mulk (AH 409–485/1018–1092 CE), might have been one of Ghaznavid patronage in Nishapur, dating to *c.* 1000 CE. See also Bulliet 1972: 250–251. For an accelerated proliferation of *madrasa*s due to Saljuq patronage, see Makdisi 1971: 81–82; Makdisi 1981: 31ff.; Bulliet 1994: 146–147 and *passim*; Peacock 2015: 211–215.
32. The classic studies by Bulliet (1972, 1994) on sources for Nishapur during the eleventh–early twelfth centuries demonstrate the intimate intertwining of economic, political, and intellectual interests among the "patricians" of the city. Nonetheless, there were rifts and reconciliations among them, and also with the rulers, depending on the situation – cf. also Bosworth 1973: 192–193.
33. Well into the eleventh century, while the Karramiyya were still in Ghaznavid favor in Nishapur and had attained high positions even in non-religious administration of the city, asceticism continued to be associated with them. Cf. Bulliet 1972: 42, 64ff.; esp. Bosworth 1973: 187–188; Bosworth [1960] 1977: 6–7. Whether this asceticism was "hypocritical" (Bosworth [1960] 1977: 11) or not, the rapid decline in the Karramiyya's fortunes shortly thereafter, and the consequent shift of their proselytism into the hinterlands, would have required even more that the adherents maintain frugal if not ascetic lifestyles.
34. By the tenth century, there were *madrasa*s in Egypt that were occupied by at least two *madhhab*s, wherein instruction according to each one took place at different locales throughout the complex, or if space was lacking, timings would be split. The multi-*madhhab* institution was not uncommon through the fourteenth century, and included such prominent foundations as Baghdad's Mustansiriyya, founded in AH 631/1234 CE to contain "four schools for the four rites …," effectively eclipsing the Shafi'i Niẓamiyya (founded AH 459/1067 CE). Cf. Tritton 1957: 100–101, 104–105; and esp. Makdisi 1981: 34.
35. Blair 1985: 81.
36. I am grateful to Gwendolyn Kristy and David Thomas for helping determine Shah-i Mashhad's orientation: Gwendolyn Kristy located ArcGIS imagery of the site, and David Thomas superimposed on it the complex's plan as reconstructed by Najimi (2015: 153), whose own plan ensued from the studies by Casimir and Glatzer (1971: 55; cf. also *ibid.*, 58) and his own documentation of the *madrasa*'s standing remains in the early 1990s. The accurate *qibla* orientation is also from Najimi (2015: 148).
37. Cf. Akhmedov 2000: 195–199. Berggren (2000: 189–190) noted that "[the] mathematical sciences acquired Islamic dimensions as its practitioners became aware that their disciplines could be used to provide exact solutions to
