a *madrasa* and the eastern one a mosque (cf. Figure 4.16). T. Lorain (Director of the Mission Archéologique Franco-Afghane – Bamiyan; MAFAB) has documented another example of two proximate domed structures indicating a larger original complex – possibly a *madrasa* – in the Bamiyan basin's Fuladi Valley. The site is now known as Khwaja Sabz Posh and has been attributed to the period of Ghaznavid or Shansabani dominance of the region. T. Lorain cited in Allegranzi 2020, n. xvii.

70. Cf. Blair 1985: 81–82; Allegranzi 2019b (forthcoming); Appendix, Afghanistan III: 4.
71. Cf. Appendix, Afghanistan III: 5d. Blair's (1985: 82) reading of the date was slightly corrected by Giunta (2010b: 177). The combination of Arabic and Persian in the same inscription was not uncommon in the epigraphy of the eastern Islamic lands during the eleventh through thirteenth centuries. Chisht's inscriptional program continued within the regional tendency of inscribing funerary and construction texts (and of course Quranic verses) in Arabic, while poetry and at times also dates were in Persian. Cf. Allegranzi 2015: 35; Allegranzi 2020, forthcoming.
72. Cf. Allegranzi 2019b (forthcoming); and Volume II.
73. I am grateful to Dr. Viola Allegranzi (pers. comm., September 2019) for sharing her ideas, to be published in a forthcoming work. See also Appendix, Afghanistan III: 4–5. Juzjani (vol. I, 1963: 354; trans. vol. I, 1881: 370) simply noted that Shams al-Din adopted the new *laqab* of Ghiyath al-Din, right after Saif al-Din's death and his own elevation to sultan and head of the Shansabani confederacy (i.e., eldest male descendant of 'Izz al-Din and his legal wife, rather than the Turkic maid – cf. Chapter 3). This would have occurred, then, in about AH 558/1163 CE. No doubt due to customary reverential respect toward overlords and patrons, Juzjani himself anachronistically referred to the Shansabanis with their regnal names even when narrating events that occurred prior to official entitlement, e.g., at the births of both Ghiyath al-Din and his younger brother Mu'izz al-Din (vol. I, 1963: 353ff.; trans. vol. I, 1881: 368ff.). However, the reverse anachronism at Chisht – of using an outdated *laqab* years after a regnal one was adopted – is unusual (Allegranzi, pers. comm., March and September 2019).
74. I am again grateful to Gwendolyn Kristy for obtaining satellite imagery of the structures at Chisht and sharing it with David Thomas and myself; this generated extremely informative discussions among us, which to me demonstrated the true intellectual generosity of these scholars.
75. Cf. Allegranzi 2019b (forthcoming); Appendix, Afghanistan III: 6–10.
76. While the "domed cube" form for tombs was in use by the tenth century in Transoxiana (cf., e.g., Grabar 1966: 17), apparently not all tombs had *mihrab*s. Tombs with *mihrab*s began to appear in the same period in the eastern Islamic lands: cf. *ibid.*, 21–22, 24, 32, 40; Patel 2015; and, of course, the discussion of Baba Khatim in the Introduction. See also Chapter 6.
77. See Blair 1992: 9, who also noted that the verses appeared frequently in writings of theologians with Mu'tazalite leanings, "as an allusion [to] and even declaration of their dogma." Cf. also Giunta (2010b: 124), who observed that these verses were "since the age of Mahmud [of Ghazna], the most frequently
