Meister 1993; and for what he termed the Gandhara-Nagara style of West Panjab and Khyber-Pakhtunkhwa (modern Pakistan) see Meister 2010; 2011 (and Chapter 6). For a full description of the three architectural cultures within Shansabani domains, see esp. Patel 2007/2011.

45. Edwards 2015: 71ff.
46. Cf. Patel 2004.
47. Sourdel-Thomine (1960: 280) declared with surprising rigidity that "post-Saljuqid Khurasani art [in Afghanistan] developed without undergoing the least innovation worthy of interest, for example upon contact with India" – an ahistorical understanding of stylistic purity that will be addressed in Volume II.
48. See Volume II for the explication of just such a process: during the last decade of the twelfth century and the first two decades of the thirteenth, artisans specially skilled in the building materials, concepts, and iconographies of northwestern India – in modern times eastern Sindh, Gujarat, and Rajasthan – made their way westward, along the corridors of mobility newly invigorated by the Ghazna Shansabanis' eastward expansion.
49. For the Juzjan structure, see Melikien-Chirvani 1968; Sourdel-Thomine 1971. For Bust, see Crane 1979. For overall bibliography, cf. Ball 2019: Nos. 149, 439.
50. See Grabar 1966 for early Islamic funerary structures, and esp. Pugachenkova 1978 for commemorative architecture in the environs of Balkh, where she documented a long trajectory of the architectural configuration through at least the fifteenth century. See also Hillenbrand 2000: 138; and Chapters 2, 4 and 6.
51. While the Juzjan tomb provided the forms and content of its extensive epigraphic program – discussed *infra* in main text (cf. also Appendix, Afghanistan I) – the one at Bust required other analytical tools: Crane (1979: 245–246) based his dating of the tomb on comparisons with similar decorative techniques in Iran and Central Asia, as well as the independent *stelae* found within the structure, which had a date range from the twelfth to thirteenth centuries. See also Sourdel-Thomine 1956; and Volume II.
52. The first publication of the tomb by A. Melikien-Chirvani (1968) attributed it to Ghaznavid presence in the region, while Sourdel-Thomine (1971) argued for Shansabani patronage.
53. See Paul 2018b: 323ff. for Balkh's shifting political fortunes during the twelfth century; for the numismatic evidence, cf. Schwarz 2002: e.g. Nos. 811, 824, 834; and the more synthetic study by O'Neal (2020). A similar debate has surrounded the tomb of al-Hakim al-Tirmizi (northwest of modern Tirmiz, Uzbekistan), with an epigraphic program noting only an ambiguous patron but no date, so that its construction and/or renovation has been attributed either to the eleventh century, possibly by a local western Qarakhanid ruler, or (most recently) to the mid-twelfth century: see Allegranzi 2020: 112ff.
54. Chapters 4 and 5 discuss the distinguishing stylistic features of Shansabani-period epigraphy, as well as the preponderance of Arabic-language and Qur'anic content along with the possible reasons for the latter. Suffice it to say here that the Qur'anic verses and references gracing the structure
