Olivier Roy also suggest Bahaziq [identified by his kunya Sheikh Abu Abdul Aziz] was among the Saudis who contributed to Muridke's construction.[13] Similarly, Pakistani media has reported al-Surayhi either contributed approximately 10 million rupees to Muridke's construction or helped to purchase the land on which the center was built.[14] Both men were acquainted with Osama bin Laden, who sometimes is rumored to have provided a portion of the seed money for Muridke. This is possible given bin Laden's efforts at the time to build his base through the distribution of largesse, but there is no definitive evidence he contributed funding and the group certainly had access to other Saudi donors at the time. In addition to whatever unofficial sources of funding received, state patronage also helped Lashkar to develop its expansive compound.

Muridke's palpable sense of ambition in terms of scale is unrivalled in the world of Pakistani jihadi organizations. The compound is surrounded by approximately 15 acres of agricultural land, with a vegetable farm where the staff grow all of their own vegetables, a children's playground, and a non-profit, subsidized grocery store. Over 100 staff members work there according to one of their number, including 20–25 farmers, 10–15 gardeners, 20–25 cooks, 60–70 madrasa instructors and 20 schoolteachers. The author visited in May 2009, at which point the Punjab provincial government had taken control of the facility in accordance with restrictions placed on the group following the 2008 Mumbai attacks. However, it continued to operate. The JuD administrator there, as well as the group's literature, attested to the fact that most of the services being offered in 2009 were in place by the beginning of the decade.[15]

Among the first buildings one sees upon entering the compound is the Abu Harrera mosque, which can hold 5,000 people along with a madrasa for 500. In addition to religious education, there is also the Dawa Model School and Science College providing instruction for students from primary school through university. The educational facilities include a computer lab, along with biology, chemistry and physics labs, each occupying one room. The school teaches math and instructs students in Urdu, Punjabi and English. Some of the students learn Arabic as well. As they progress students choose from one of two tracks, arts or sciences. The school charges 500–2,000 rupees per month depending on what a student's family can afford. Male students can live in a hostel, which has 100 rooms each
