this counter-insurgency strategy. This picture serves as a sobering reminder for anyone who believed that arming the most accommodating militias came without grave risks.

The case of 14-year-old Malala Yousafzai was no different; winner of the Nobel Peace Prize Malala Yousafzai was shot because she was used by the state as an anti-Taliban national hero. The government awarded her with a huge sum of money along with other titles, but she was left among the people who had already threatened her and other girls in Swat.

The attack on Malala Yousafzai depicted the story of negligence on the part of the security forces that failed to protect her. In one way or the other, Malala was part of counter-insurgency; hence, she became the target of militants. She wrote a diary against Taliban activities in the region even at the time when the writ of Taliban was strong in Swat. She not only continued her education, but also encouraged other girls to do so even when Taliban banned girls' education in Swat. She had been projected by the state as an education icon.

The government must compensate the victims and protect the civilians in the areas (FATA and KP) where the war has been imposed. The best way of protecting civilians from militants was to keep them away from counter-insurgency strategy. Their involvement in it could jeopardise their lives. Although the local intrepid tribesmen could fight effectively against their enemy, in the case of the Taliban or other militants, they were quite ambivalent. They did not know whether the government was sincere in curbing the militant elements from society or wanted to keep them for some hidden state-strategic purpose. The government should have cleared this confusion to enable them to identify friends or enemies so that they could fight against their enemies, with clear goals and objectives. It would have been better if the government had utilised the potential of communities in sustaining peace by deploying them in the areas cleared by the security forces. Pitting the civilians against the militants would be dangerous in a tribal society (FRC, 2012).

PEACE DEAL POLITICS

Roogha (reconciliation or compromise) and *Soolah* (truce) were two integral aspects of *Pashtunwali* (the Pashtun code) (Globalpolitician.com). India Office Library, London, contains the oldest peace agreement
