develop a partnership that can claim some leverage in Asia's great-power politics.

In the final and concluding part of the volume, the editors attempt to conclude where on the balancing–hedging–bandwagoning spectrum India's current policy on China is located and address the main drivers and challenges involved. The concluding chapter also discusses if India's response to China's rise confirms or challenges conventional balance-of-power theory and the concept of hedging. Finally, the concluding chapter presents some future scenarios for India's search for security within the changing Indo-Pacific geopolitical theatre, whether India in the future would move towards more rivalry with China, and if India–China relations would be characterised by more or less connectivity.
