Sikkim to Burma and part two the portion stretching between Ladakh and Nepal.[24] Although the government accepted most of the committee's recommendations, progress was particularly slow in establishing road communications because of unpenetrated jungles and heavy rainfall in NEFA and extreme cold weather and high mountain passes in all three sectors of the border. Nonetheless, roads were built, including those running from Srinagar to Leh, Leh to Chushul and Demchok, and Tezpur to Bomdila and Ziro. In addition, airfields were constructed at Jammu, Leh, and all the district headquarters in NEFA. These steps were accompanied by an increase in the number of armed police battalions and Assam Rifles units raised and deployed.[25]

Part two of the Committee's report also contained recommendations for securing the borders of Bhutan, Nepal, and Sikkim. These were drawn from another report prepared by a committee headed by Major General S. P. P. Thorat which had specifically carried out an appraisal of the security requirements of the Himalayan states. Like the recommendations made for India, these also highlighted the importance of establishing check posts, extending administration into remote areas, improving road communications, and modernising their forces. In effect, the Himmatsinhji Committee emphasised that Indian security was intricately connected with the security of the Himalayan states.[26] This was, however, not a new realisation, as evident from India's previous decision to renew the British Raj's treaties with all three Himalayan states. The India–Sikkim treaty of December 1950 perpetuated Sikkim's protectorate status, made India responsible for its "defence and territorial integrity" and external relations, and gave India the "exclusive right" to construct and maintain strategic roads as well as regulate the use of all communications infrastructure and facilities.[27] Later, in
