```
</div>

</body>
</html>
```

6.16.4.6 Step 6: Create Main View

Now we will create the main view that will extend the layout and display the current theme.

Create `resources/views/home.blade.php`:

```
@extends('layouts.app')

@section('title', 'Home')

@section('content')
    <div class="p-4 border rounded">
        <h1>Welcome to the Theme Demo!</h1>
        <p>Current Theme: <strong>{{ ucfirst($theme) }}</strong></p>
        <p>Use the navigation links to switch themes.</p>
    </div>
@endsection
```

Save the file and make sure it is in the correct directory.

6.16.4.7 Step 7: Run the Application

After completing all steps, start the Laravel development server:

```
php artisan serve
```

Open your browser and visit:

- Home: http://127.0.0.1:8000/home

Click on **Light** or **Dark** in the navbar to switch themes. The selected theme is stored in the session and affects the entire layout.
