If you don’t have Docker installed, you can download it from Docker’s official website, https://www.docker.com/get-started.

> *This lab uses **PHP 8.4**, **Laravel 12** and **Visual Studio Code** as the primary editor.*

9.9.4 Steps

Here are the steps to implement the image upload feature using signed URLs with MinIO:

9.9.4.1 Step 1: Create a New Laravel Project

We will create a new Laravel project for this lab. Open your terminal and run:

```
laravel new image-temp-minio
cd image-temp-minio
code .
```

You should see the Laravel project in your editor.

9.9.4.2 Step 2: Run MinIO Server with Docker

We will run MinIO using Docker. Open your terminal and run the following command:

```
docker run -p 9000:9000 -p 9001:9001 \
  -e "MINIO_ROOT_USER=minioadmin" \
  -e "MINIO_ROOT_PASSWORD=minioadmin" \
  quay.io/minio/minio server /data --console-address ":9001"
```

If you have Windows, you can use the following command:

```
docker run -p 9000:9000 -p 9001:9001 ^
  -e "MINIO_ROOT_USER=minioadmin" ^
  -e "MINIO_ROOT_PASSWORD=minioadmin" ^
  quay.io/minio/minio server /data --console-address ":9001"
```

MinIO Console: http://localhost:9001

Login:

- User: `minioadmin`
- Pass: `minioadmin`
