Edit `app/Models/Product.php`:

```
<?php

namespace App\Models;

use MongoDB\Laravel\Eloquent\Model;

class Product extends Model
{
    protected $connection = 'mongodb';
    protected $collection = 'products';

    protected $fillable = ['name', 'price'];
}
```

Save the file and close it.

12.12.4.6 Step 6: Create Product Seeder

We will create a seeder to populate the `products` collection with sample data. Run the following command to create the seeder:

```
php artisan make:seeder ProductSeeder
```

Edit `database/seeders/ProductSeeder.php`:

```
<?php

namespace Database\Seeders;

use Illuminate\Database\Seeder;
use App\Models\Product;

class ProductSeeder extends Seeder
{
    public function run()
    {
        Product::truncate();

        for ($i = 1; $i <= 100; $i++) {
            Product::create([
                'name' => "Product $i",
                'price' => rand(10, 500)
            ]);
        }
    }
}
```

Update `DatabaseSeeder.php` to call this seeder:

```
class DatabaseSeeder extends Seeder
{
```
