```
Route::get('/logout', [GoogleAuthController::class, 'logout'])->middleware('auth');

Route::get('/', function () {
    return view('welcome');
});
```

Save the file.

13.10.4.9 Step 9: Add Login Button to Welcome View

We need to add a button to the welcome view to initiate Google login. Open `resources/views/welcome.blade.php` and add the following code:

Edit `resources/views/welcome.blade.php`:

```
...
    <ul class="flex gap-3 text-sm leading-normal">
        <li>
            <a href="https://cloud.laravel.com" target="_blank" class="inline-block
dark:bg-[#eeeeec] dark:border-[#eeeeec] dark:text-[#1C1C1A] dark:hover:bg-white
dark:hover:border-white hover:bg-black hover:border-black px-5 py-1.5 bg-[#1b1b18]
rounded-sm border border-black text-white text-sm leading-normal">
                Deploy now
            </a>
            <a href="{{ url('/auth/google') }}" target="_blank" class="inline-block
dark:bg-[#eeeeec] dark:border-[#eeeeec] dark:text-[#1C1C1A] dark:hover:bg-white
dark:hover:border-white hover:bg-black hover:border-black px-5 py-1.5 bg-[#1b1b18]
rounded-sm border border-black text-white text-sm leading-normal">
                Login with Google
            </a>
        </li>
    </ul>
....
```

We added a button that links to the `/auth/google` route near the **Deploy now** button. This will redirect users to Google for authentication.

13.10.4.10 Step 10: Run and Test

Start the Laravel server:

```
php artisan serve
```

Visit:

- `http://localhost:8000` → click **Login with Google**
