- **GET Request**

```
curl -X GET http://127.0.0.1:8000/api/hello
```

- **POST Request**

```
curl -X POST http://127.0.0.1:8000/api/hello \
    -H "Content-Type: application/json" \
    -d '{"name":"Mekka"}'
```

For Windows, change `\` to `^` in the above command.

- **PUT Request**

```
curl -X PUT http://127.0.0.1:8000/api/hello
```

- **DELETE Request**

```
curl -X DELETE http://127.0.0.1:8000/api/hello
```

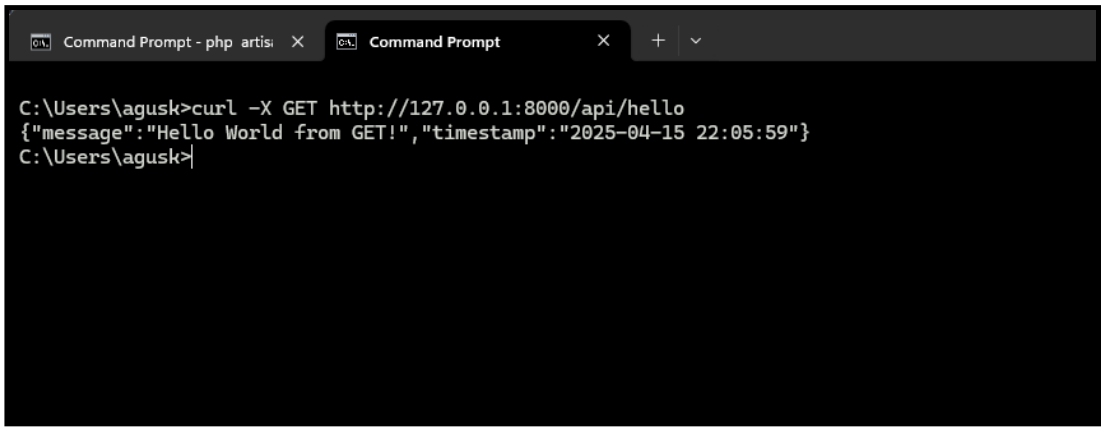

Figure 14.2: cURL API Testing.

14.10.5 Summary

In this hands-on lab, you have successfully:

- Activated **API support** in Laravel 12
- Created a **REST API** with GET, POST, PUT, and DELETE methods
- Implemented a **Hello World API** that returns a message and timestamp
- Tested the API using **Postman and cURL**

This lab **sets the foundation for REST API development** in Laravel 12.

14.11 Exercise 43: Building a Calculator REST API in Laravel 12
