```
class TheHellIsGoingOnRn
{
    public $solution = null;
    public function noClue(): void
    {}
}
$mystery = new TheHellIsGoingOnRn();
$prop = $mystery->solution?->answer();
$answer = $mystery->noClue()?->answer();
var_dump($prop);
var_dump($answer);
```

```
Output:
NULL
NULL
```

You can even use null safe on the object variable itself:

```
$noObject = null;
var_dump($noObject?->whatever());
```

```
Output:
NULL
```

Bitwise Operations

Just a quick word of caution concerning the bitwise operators in PHP – care should be taken because some of the logical and comparison operators in PHP are quite similar. These are the ones to watch out for:
