Creating and Accessing Arrays

There are two ways to create an array in PHP. The syntax is different, but the end result is the same: you can use either the language construct `array()` or the more recent (since PHP 5.4) short array syntax denoted by square brackets `[]`:

```
$myArr1 = array();
$myArr2 = array('Bob', 'Alice');
$myArr3 = [];
$myArr4 = ['Bob', 'Alice'];

var_dump($myArr1);
var_dump($myArr2);
var_dump($myArr3);
var_dump($myArr4);

Output:
array(0) {
}
array(2) {
  [0]=>
  string(3) "Bob"
  [1]=>
  string(5) "Alice"
}
array(0) {
}
```
