It is also possible to test for specific members, both public and non-public:

```
var_dump(property_exists($wiz, 'level'));
var_dump(property_exists(Wizard::class, 'exp'));
var_dump(method_exists(Wizard::class, 'magicMissile'));
var_dump(method_exists($wiz, 'longRest'));
```

```
Output:
bool(true)
bool(true)
bool(true)
bool(true)
```

One more function exists that will report an object's properties: the interestingly named `get_mangled_object_vars()`. This function will return hidden object properties as well as public, albeit with some caveats:

```
class Cleric
{
    public int $level = 2;
    private int $exp = 0;
    protected int $gold = 1;

    public function prayerOfHealing(): void
    {
        // fix stuff
    }
}

var_dump(get_mangled_object_vars(new Cleric()));
```

```
Output
Array
(
    [level] => 2
    [Clericexp] => 0
    [*gold] => 1
)
```
