Table 7-3. (*continued*)

Function	Description
`min(n1, ...nX)`	Find the lowest value in all n
`min(arr)`	Find the lowest value in array
`pi()`	Get value of pi (returns `M_PI`)
`pow(n1, n2)`	Returns `n1 ** n2`
`rad2deg(n)`	Returns the degree equivalent of n radians
`round(n)`	Rounds a float n
`sin(n)`	Sine
`sinh(n)`	Hyperbolic sine
`sqrt(n)`	Square root
`tan(n)`	Tangent
`tanh(n)`	Hyperbolic tangent

These are the utility functions.

Table 7-4. *Numerical utility functions*

Function + params	Description
`base_convert(s, n1, n2)`	Numerical string n from base `n1` to `n2`
`bindec(s)`	Binary string `s` to decimal int
`decbin(n)`	Decimal int n to binary string
`dechex(n)`	Decimal int n to hexadecimal string
`decoct(n)`	Decimal int n to octal string
`hexdec(s)`	Hexadecimal string `s` to decimal int
`is_finite(x)`	True if x is a legal finite number
`is_infinite(x)`	True if x is infinite (out of bounds)
`is_nan(x)`	True if x is not a number
`octdec(s)`	Octal string `s` to decimal int
