```
$ docker-php -v
PHP 8.4.6 (cli) (built: Apr 11 2025 17:00:54) (NTS)
Copyright (c) The PHP Group
Built by https://github.com/docker-library/php
Zend Engine v4.4.6, Copyright (c) Zend Technologies

$ docker-php -a
Interactive shell

php > echo "hello world";
hello world
php >
```

Cleaning Up

If you've been following the text, you will have some stopped containers from earlier commands. Docker is conservative when it comes to garbage collection, and tends not to remove anything unless told to. Run `docker ps -a` (which is a shorthand form of the command `docker container ls -a`) to see all the containers Docker is aware of:

```
$ docker ps -a
CONTAINER ID   IMAGE         COMMAND                  CREATED
STATUS                      PORTS     NAMES
cd4276cc9300   hello-world   "/hello"                 3 minutes ago
Exited (0) 3 minutes ago              eager_haslett
d17bfc1196f3   php:8.4-cli   "docker-php-entrypoi…"   3 hours ago
Exited (0) 3 hours ago                quizzical_sinoussi
d582caa6df2f   php:8.4-cli   "docker-php-entrypoi…"   3 hours ago
Exited (1) 3 hours ago                vigorous_swanson
...
```

If Docker has seen prior use on your system for other things you'll possibly see those containers too. Containers can be removed by running the following command:

```
$ docker container prune
WARNING! This will remove all stopped containers.
Are you sure you want to continue? [y/N] y
```
