```
$formatter = new NumberFormatter('fr_FR', NumberFormatter::DECIMAL);
print $formatter->format(1000000000.01);
Output:
1 000 000 000,01
```

Earlier on in this chapter, we looked at collation; here's a recap:

```
$collator = new Collator('pl_PL.UTF-8');

$polishNames = [
    "Łukasz",
    "Marcin",
    "Tomasz",
];

$collator->sort($polishNames);
print_r($polishNames);
Output:
Array
(
    [0] => Łukasz
    [1] => Marcin
    [2] => Tomasz
)
```

The following APIs are offered by the `intl` module (most are OOP, with a few that simply offer functions); the list is not exhaustive:
