Table 9-4. *DateTime modification methods*

`DateTime::add()`	Accepts a `DateInterval` object and adjusts object time accordingly
`DateTime::setDate()`	Change the year, month, and day using integers
`DateTime::setISODate()`	Change the year, week number, and day number (ISO 8601 standard)
`DateTime::setTime()`	Change the hours, minutes, seconds, and microseconds of current time
`DateTime::setTimestamp()`	Change date/time using a Unix timestamp integer
`DateTime::setTimezone()`	Accepts a `DateTimeZone` object and changes time zone

Let's see some of those in action:

```
$dti = new DateTimeImmutable('@1725148800');
print $dti->format(DateTime::COOKIE) . PHP_EOL;

print $dti->setDate(2024, 9, 3)
    ->format(DateTime::COOKIE) . PHP_EOL;

print $dti->setTimeZone(new DateTimeZone('PST'))
    ->setISODate(2024, 36, 2)
    ->setTime(5, 0)
    ->format(DateTime::COOKIE) . PHP_EOL;

print $dti->setTimestamp(1725368400)
    ->setTimezone(new DateTimeZone('PST'))
    ->format(DateTime::COOKIE);

Output:
Sunday, 01-Sep-2024 00:00:00 GMT+0000
Tuesday, 03-Sep-2024 00:00:00 GMT+0000
Tuesday, 03-Sep-2024 05:00:00 PST
Tuesday, 03-Sep-2024 05:00:00 PST
```
