```
    day: 3,
    year: 2024,
);
var_dump($tstamp);

date_default_timezone_set('America/Los_Angeles');
$tstamp = mktime(
    hour: 5,
    minute: 0,
    second: 0,
    month: 9,
    day: 3,
    year: 2024,
);
var_dump($tstamp);

Output:
int(1725339600)
int(1725364800)
```

PHP provides the `gmmktime()` function as a convenient way to ensure the timezone is set to UTC and is otherwise a wrapper around `mktime()`:

```
date_default_timezone_set('America/Los_Angeles');
$tstamp = gmmktime(
    hour: 5,
    minute: 0,
    second: 0,
    month: 9,
    day: 3,
    year: 2024,
);
var_dump($tstamp);

Output:
int(1725339600)
```
