```
    value: 'choc chip obvs',
    expires_or_options: time() + 3600,
);
print "Thanks for visiting!\n";
```

```
$ curl -v http://localhost:8080/index.php
...
< Set-Cookie: flavour=choc%20chip%20obvs; expires=Wed, 09 Jul 2025 10:42:08
GMT; Max-Age=3600
```

To delete a cookie, simply set the `expires_or_options` parameter to a timestamp in the past, which will instruct the client to remove the cookie from its store.

```
setcookie(
    name: 'flavour',
    value: '',
    expires_or_options: time() - 3600,
)
```

One more thing to note, it is possible to create structured cookie data by using array notation like this...

```
// index.php
setcookie(
    name: 'flavour[best]',
    value: 'choc chip obvs'
);
setcookie(
    name: 'flavour[worst]',
    value: 'there is no worst'
);
```

... which would result in two `Set-Cookie:` response headers:

```
...
< Set-Cookie: flavour[best]=choc%20chip%20obvs
< Set-Cookie: flavour[worst]=there%20is%20no%20worst
```
