```
$html5 = <<<EOS
<!DOCTYPE html>
<html>
  <head>
    <meta charset="utf-8" />
    <title>HTML5 is lovely</title>
  </head>
  <body>
    <header>Page header</header>
    <main>Main content</main>
    <footer>Page footer</footer>
  </body>
</html>
EOS;

$dom = new DOMDocument();
$dom->loadHTML($html5);

Output:
PHP Warning:  DOMDocument::loadHTML(): Tag header invalid...
PHP Warning:  DOMDocument::loadHTML(): Tag main invalid...
PHP Warning:  DOMDocument::loadHTML(): Tag footer...
```

The `header`, `main`, and `footer` semantic elements were introduced in HTML5. They don't exist in `http://www.w3.org/TR/html4/strict.dtd`, and PHP duly spits out some warnings. But! We still get a DOM tree to play with, because `DOMDocument` (and `Dom\HTMLDocument`) are pretty forgiving, which is definitely in the spirit of Getting Things Done On The Web…

```
$nodes = $dom->getElementsByTagName('header');
print "Found {$nodes->length} matching node(s)" . PHP_EOL;
var_dump($nodes[0]->textContent);

Output:
Found 1 matching node(s)
string(11) "Page header"
```
