internally). The full list of Twig filters, and their documentation, can be found at https://twig.symfony.com/doc/filters/index.html

Twig Control Structures

PHP's control structures are abstracted by the following tags:

Table 11-29. *Twig control structures*

{% if %} {% endif %}	Test a logical expression, and render the block if true
{% for %} {% endfor %}	Iterate a sequence, rendering the block each time

The following PHP and template code demonstrates some simple use cases:

```
// index.php
print $twig->render('control-structures.html.twig', [
    'renderA' => true,
    'renderB' => false,
    'family' => ['Jess', 'Anna', 'Paul'],
]);
```

```
{# views/control-structures.html.twig #}
{% if renderA %}
  <ul>
    {% for member in family %}
      <li>{{ member }}</li>
    {% endfor %}
  </ul>
{% endif %}
{% if renderB %}
  <p>Hello from B</p>
{% endif %}
```

```
$ curl http://localhost:8080/index.php
  <ul>
    <li>Jess</li>
    <li>Anna</li>
```
