```
Output:
1
1
1
```

Iterable Tests

Sequence (arrays) and mappings (associative arrays) have specialized tests:

`in` | `true` if lefthand value is found in a sequence or mapping |

`has some CLOSURE` | Test that at least one element returns true from CLOSURE |

`has every CLOSURE` | Test that all elements return true from CLOSURE |

The following examples all evaluate to `true` (note the type coercion in the first expression):

```
{# views/iterable-tests.txt.twig #}
{{ '1' in [1, 2 ,3] }}
{{ [2,3,4] has every v => v > 1 }}
{{ ['Jess', 'Anna', 'Paul'] has some v => v == 'Jess' }}
```

Miscellaneous Operators

The remaining operators are given below:
