Enums (*cont.*)
constants, 334
drawback, 336
implementation, 334
strings, 334
Environment variables, 33
error_reporting()
function, 189
Errors
checking, 519–521
control, 189–191
handling, 191–192
ini config directives, 191
levels, 188, 189
PHP 7, 195
Exceptions
catching, 194–197
concepts, 193
DIY, 198
finally..., 198, 199
handling, 199, 200
stack traces, 201–206
throwing, 193, 194
explode(), 475, 476
Extended ASCII, 423
Extensible markup language (XML)
defined, 746

F

Factory method, 664, 665
FastCGI, 2, 23
FastCGI Process Manager (FPM), 23, 27
fclose(), 54
Fedora, 854
fgets(), 54
file_get_contents(), 715
File handling, 61
File System Safe UCS Transformation Format (FSS-UTF), 429
Filter functions, 845–851
FILTER_SANITIZE_* constants, 848–851
Filter_var*() functions, 846–848
First-class functions, 160
Floating-point numbers, 390–393
Floating-point precision, 394–398
fopen(), 54, 56, 57, 714
Formula, 8
form-urlencoded string, 713
FP, *see* Functional programming (FP)
fprintf(), 498
FSS-UTF, *see* File System Safe UCS Transformation Format (FSS-UTF)
Fullwidth, 513
Functional array processing
array_map(), 277–278
array_reduce(), 279–280
array_walk(), 274–277
Functional programming (FP), 148, 159, 160
Functions
arguments and parameters, 102
bool value, 176
concepts, 99
declarations, 109
empty(), 177
hoisting, 101
logical expressions, 176
named, declaring and calling, 100, 101
returning, 103, 104
scalar type coercion, 104, 106
strict types, 106

G

Garbage collection, 299, 742
GB 2312-1980 encoding standard, 424
