```
    {
        return Socialite::driver('github')->redirect();
    }
     // Obtain the user information from GitHub.
    public function handleProviderCallback()
    {
        $githubUser = Socialite::driver('github')->user();
        // You can now use $githubUser->token, $githubUser->getName(), etc.
        // Implement your logic to find or create a local user record here.
        // For demonstration, simply return the user data.
```
