```
            $table->foreignId('post_id')->constrained()-
>onDelete('cascade');

            $table->foreignId('tag_id')->constrained()-
>onDelete('cascade');

            $table->timestamps();

    });

}

public function down()

{

    Schema::dropIfExists('post_tag');

}
```

Finally, we need to run the migration to create the necessary tables:
