This command creates a new seeder file named **PostsTableSeeder.php** in the **database/seeders** directory.

Writing Seeder Logic

Next, open the newly created file and update the **run()** method to insert realistic test data. You might insert data manually or use a factory for dynamic data generation. For example:

```
namespace Database\Seeders;

use Illuminate\Database\Seeder;

use Illuminate\Support\Facades\DB;

use Carbon\Carbon;

class PostsTableSeeder extends Seeder

{
```
