```
            [
                'title' => 'Second Post',
                'content' => 'Here is some content for the second post.',
                'user_id' => 1,
                'created_at' => Carbon::now(),
                'updated_at' => Carbon::now()
            ]
        ]);
    }
}
```

---

Alternatively, if you have defined model factories, you could call them here for generating multiple records dynamically.
