```
50 characters.',

    'email.required'      => 'An email address is required for registration.',

    'email.email'         => 'Please enter a valid email address.',

     'password.required' => 'A password is required.',

    'password.min'        => 'The password must be at least 8 characters long.',

     'password.confirmed' => 'The password confirmation does not match.',

];

$validatedData = $request->validate($rules, $messages);
```

Now, you are ready to develop custom validation logic and tailored feedback that clearly communicates precise issues to your users. This will reinforce the security and integrity of the data in "myapp."
