```
        'days' => 14,

    ],

],
```

---

Then, update your **.env** file so that, at least in production or during testing, your application writes error logs to this channel:

---

```
LOG_CHANNEL=pulse
```

---

This configuration ensures that all critical issues and errors are directed to a dedicated log file that Laravel Pulse monitors continuously.

## Integrating Laravel Pulse

The Laravel Pulse automatically picks up the standard logs generated by Laravel. In addition to automatic log capturing, you
