NEXMO_SECRET=your-nexmo-secret

NEXMO_SMS_FROM=your-sender-number

# For Laravel 9+ using Vonage:

VONAGE_KEY=your-vonage-key

VONAGE_SECRET=your-vonage-secret

VONAGE_SMS_FROM=your-sender-number

---

Just insert the actual credentials and then you can observe that these values ensure that when the notification system attempts to send an SMS, it can authenticate with the carrier service.

Sending Test Notification

Now we move on to modifying one of your controller methods, such that it triggers the **ImportantEventNotification** when a critical event occurs. For example, in your you can add a method to send the notification:
