```
    'options' => [
        'cluster' => env('PUSHER_APP_CLUSTER'),
        'useTLS' => true,
    ],
],
```

Laravel will now use these settings to establish a connection with Pusher for broadcasting events.

Creating and Broadcasting Event

To show how real-time push notifications work, we will create a custom event. For example, let's say we want to let users know when a new chat message comes in. Here, we just run the Artisan command:
