The Laravel automatically logs failed jobs in the **failed_jobs** table. We can create such table by running:

---

php artisan queue:failed-table

php artisan migrate

After this, any job that exhausts its retry attempts gets recorded in the **failed_jobs** table. You can view failed jobs by running:

---

php artisan queue:failed

This command lists jobs that have failed along with the error messages that caused the failure and the detailed logs can be found in

Customizing Failure Handling

The Laravel allows you to define a **failed()** method on your job class. This method is executed when the job has failed
