permanently after all retry attempts are exhausted. In your **GenerateReportJob** class, we can add a **failed()** method to handle such cases:

```
public function failed(Exception $exception)

{

    // Here you can send notifications, log extra details, or perform other cleanup actions

    \Log::critical("Job permanently failed for report ID: {$this->reportId}. Exception: " . $exception->getMessage());

    // Optionally, send an alert to the admin team using the Notification system

   // $admin = User::where('role', 'admin')->first();

   // $admin->notify(new JobFailureNotification($this->reportId, $exception->getMessage()));

}
```
