```
    // Retry until 1 hour from now

    return now()->addHour();

}
```

This function defines how long the job should keep retrying before it is considered as permanently failed.

Testing Retry Mechanism

So here, we first try to trigger the job. To do this, in your we dispatch the

---

```
public function generateReport(Request $request)

{

    $reportId = $request->input('report_id', 1);

    GenerateReportJob::dispatch($reportId);
```
