>name('media.download');

Now to do the testing, we upload a file via an API client like Postman or a simple HTML form. We then verify that the file is stored in **storage/app/media** and that appropriate file permissions are set by checking with Linux commands:

---

ls -l storage/app/media

Verifying System Security

Now here, after configuring storage and file upload functionalities, we can easily use the Linux commands to verify permissions and security. For example:

---

ls -l storage/app/media

Optionally, you can create bash scripts to monitor and log any changes in the media storage directory. This can be scheduled
