file if needed, but for most cases the default settings will suffice. The integration allows you to chain image manipulation methods fluently.

Implementing Automated Image Processing

Now here, to demonstrate image processing, we will open our existing controller and add a method that handles an image upload, processes it, and stores the optimized version.

```
namespace App\Http\Controllers;

use Illuminate\Http\Request;

use Illuminate\Support\Facades\Storage;

use Intervention\Image\Facades\Image;

class MediaController extends Controller

{

    public function uploadAndProcess(Request $request)
```
